## 1 Graph Algorithm

Implement the following graph algorithms using C++.

1. BFS
2. DFS Recursive
3. DFS Iterative

---

### Algorithm 1 BFS

---

```
1: procedure BFS( $G, v$ )
2:    $queue \leftarrow \text{int} \rightarrow Q$ 
3:    $Q.push(v)$ 
4:    $visited[v] = TRUE$ 
5:    $distance[v] = 0$ 
6:   while  $!Q.empty()$  do
7:      $p = Q.front()$ 
8:      $Q.pop()$ 
9:     for  $i \leftarrow 0, G[v].size()$  do
10:       $next = graph[v][i]$ 
11:      if  $visited[next] == 0$  then
12:         $Q.push(next)$ 
13:         $visited[next] = 1$ 
14:         $distance[next] = distance[v] + 1$ 
15:      end if
16:    end for
17:  end while
18: end procedure
```

---

---

**Algorithm 2** DFS Recursive

---

```
1: procedure DFS( $G, v$ )
2:    $visited[v] = TRUE$ 
3:   for  $i \leftarrow 0, G[v].size()$  do
4:      $next = graph[v][i]$ 
5:     if  $visited[next] == 0$  then
6:       DFS( $next$ )
7:     end if
8:   end for
9: end procedure
```

---

---

**Algorithm 3** DFS Iterative

---

```
1: procedure DFS( $G, v$ )
2:    $Stack < int > S$ 
3:    $S.push(v)$ 
4:    $visited[v] = TRUE$ 
5:   while  $!S.empty()$  do
6:      $p = S.top()$ 
7:      $S.pop()$ 
8:     for  $i \leftarrow 0, G[v].size()$  do
9:        $next = graph[v][i]$ 
10:      if  $visited[next] == 0$  then
11:         $S.push(next)$ 
12:         $visited[next] = 1$ 
13:      end if
14:    end for
15:  end while
16: end procedure
```

---
